Key features

Solenoid valves VUVS

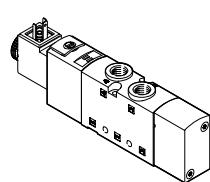

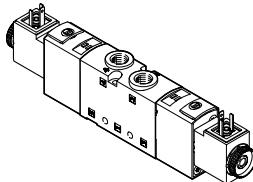

In-line valve VUVS-LK as individual valve (piston spool valve)

In-line valve VUVS-LT as individual valve (poppet valve)

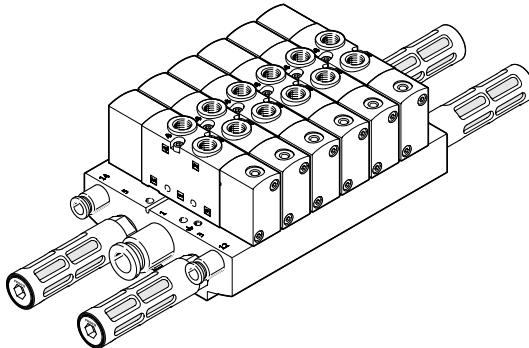

In-line valve VUVS-L as individual valve (piston spool valve)

In-line valves are designed to be used without being linked pneumatically. All pneumatic connections are on the valve and can be equipped with fittings/tubing.

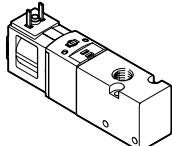

By using a special seal set, the in-line valves can also be mounted on a manifold rail (pneumatic links) as semi in-line valves.

Note

The operating voltage of valves VUVS-L and VUVS-LT can be varied by changing the solenoid coil on the armature tube.

Key features

- A maximum of 16 valve positions can be configured in the standard version (for VUVS-L variant only)
- A maximum of 12 valve positions can be configured in the compact version (maximum of 10 valve positions for VUVS-LK variant)
- Valve positions 2 ... 10 in increments of 1, valve positions 10 ... 16 in increments of 2
- Manifold block with a maximum of 10 valve positions
- Extension module with 2 valve positions
- Common supply manifold with a maximum of 10 valve positions
- Creation of pressure zones (maximum 9 pressure zones for a valve manifold assembly with 16 valve positions)

Design

Replacing valves

Each valve is attached to the manifold block using two screws. The appropriate seal is mounted on the valve.

This means that the valves can be easily replaced.

Extension

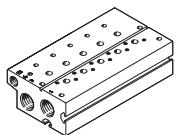

Valve positions covered with cover plates can be replaced with valves at a later date. The dimensions, mounting points and existing pneumatic installation remain unchanged.

Extension modules with two valve positions are available for the standard manifold block. A manifold block can be extended with a maximum of three extension modules.

Cover plate for vacant position

For covering vacant valve positions

Separator for pressure zones

For creating pressure zones (maximum 9 pressure zones permitted)

Supply plate

For additional air supply and exhaust via a valve position

Note

A filter must be installed upstream of valves operated in vacuum mode. This prevents any foreign matter in the intake air getting into the valve (e.g. when operating a suction cup).

Key features – Pneumatic components

Creating pressure zones and separating exhaust air

Compressed air is supplied and exhausted via the manifold block/common supply manifold and via supply plates.

The position of the supply plates and duct separations can be freely selected with the VTUS.

A pressure zone is created by isolating the internal ducts between the valve positions with an appropriate separator.

The separator can be used in the following ducts:

- Duct 1
- Duct 3
- Duct 5

- Use a separator if the exhaust air pressures are high
- Use at least one supply plate/air supply for each pressure zone
- Pressure zone separation is not possible in ducts 12 and 14 (pilot air supply)

Duct separation

	Description
	<p>The pressure zones can be freely configured with the VTUS. The following duct separations are possible:</p> <ul style="list-style-type: none"> • Duct 1 closed
	<ul style="list-style-type: none"> • Duct 1/3/5 closed
	<ul style="list-style-type: none"> • Duct 3/5 closed <p>The number of pressure zones with the VTUS is limited by the number of valve positions on the manifold block/common supply manifold. Note that each supply plate occupies one valve position. There must always be at least two valve positions between two separators. In the case of a maximum extension of 16 valve positions, a maximum of 9 pressure zones can be created.</p>

Mounting – Valve manifold assembly VTUS

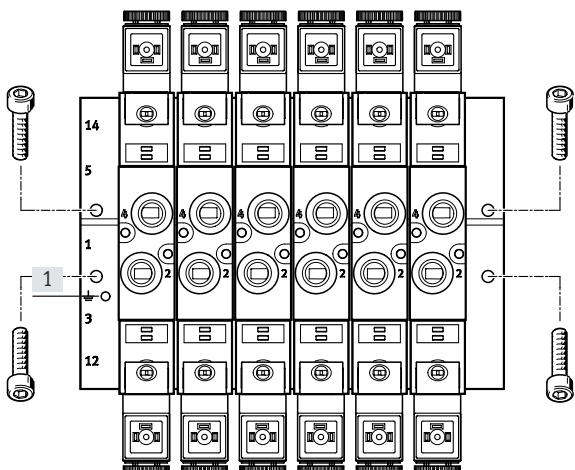

Sturdy manifold assembly thanks to:

- Four through-holes for wall mounting
- DIN rail mounting

Note
Use the thread M4/M5 provided on the manifold block for earthing the valve manifold assembly.

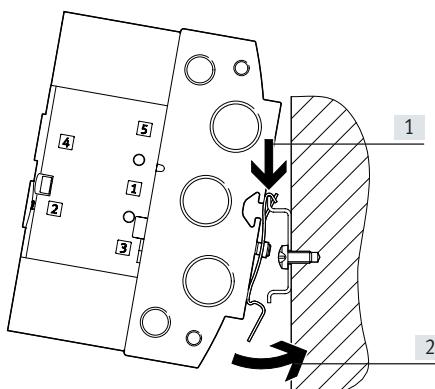

Wall mounting

Sturdy wall mounting of the manifold block using four through-holes.

[1] Earth connection

DIN rail mounting

The DIN rail mounting VAME-T-M... consists of two mounting clips. These are screwed onto the manifold block on the left and right.

The valve manifold assembly VTUS is then lowered onto the DIN rail from above (arrow A) and clipped into the DIN rail at the bottom (arrow B).

Note

- Note the max. tightening torque of the screws for DIN rail mounting
- Only horizontal DIN rail mounting permitted
- Mounting only permissible on DIN rail TH 35-... to EN 60715
- Vibration/shock loads are not permitted with DIN rail mounting
- Additional note on assembly
